

Disseminating ABA into Public Schools: Prior and Current Research at the University of Houston, Clear Lake

Dorothea C. Lerman, Ph.D., BCBA-D

CADD
CENTER FOR AUTISM AND
DEVELOPMENTAL DISABILITIES

Introduction

¹ U.S. Department of Education, National Center for Education Statistics. (2016). *Digest of Education Statistics, 2014* (NCES 2016-006), Chapter 2.

- Barriers to dissemination
 - Training time
 - Resources
 - Availability of qualified trainers

Prior and Current Research

□ Focused Training on Core ABA Teaching Procedures

- Outcomes of a five-day summer training program (preference assessments, discrete-trial teaching, incidental teaching)

Lerman, Vorndran, Addison, & Kuhn (2004)

Lerman, Tetreault, Hovanetz, Strobel, & Garro (2008)

- Comparison of written, vocal, and video-assisted feedback

Luck, Lerman, Wu, Dupuis, & Hussein (under review)

Introduction

□ Focused Training on Core ABA Teaching Procedures

■ Pyramidal training of peers and paraprofessionals

Woo, Lerman, Luck, Dupuis, & Bao (in preparation)

Lerman, Luck, Smothermon, Zey, Custer, & Smith (in preparation)

Introduction

□ Training to Identify Potential Antecedents/Consequences of Problem Behavior

■ Narrative versus structured A-B-C recording

Lerman, Tetreault, Hovanetz, Stroble, & Garro (2008)

■ Computer-based training in A-C detection

Scott, Lerman, & Luck (in preparation)

Five-Day Focused Training

Topics

Basic Concepts of Applied Behavior Analysis

*Preference Assessments

Behavioral Assessment

*Discrete Trial Teaching

Shaping and Chaining

Generalization and Maintenance of Skills

*Incidental Teaching

IEP Goals/Objectives

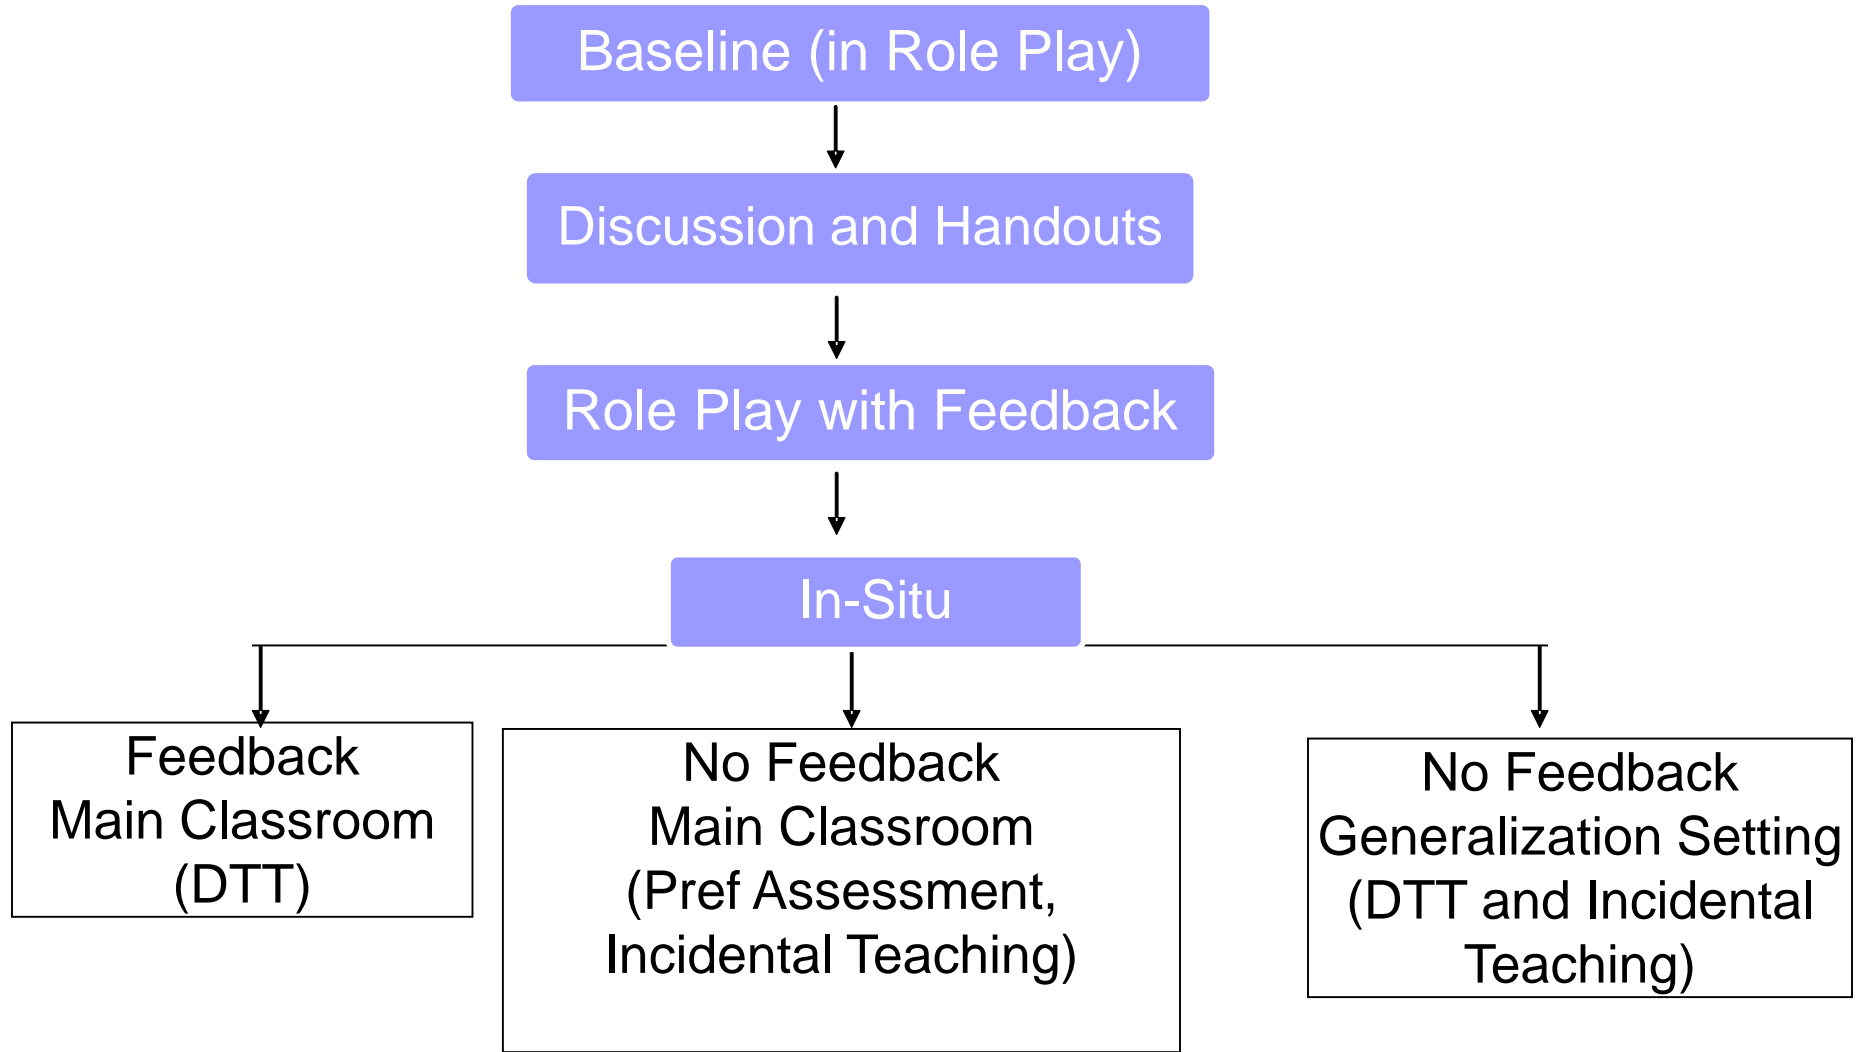

Data Collection

*Managing Problem Behavior

*Includes both didactic and hands-on training

Lerman et al. (2004)

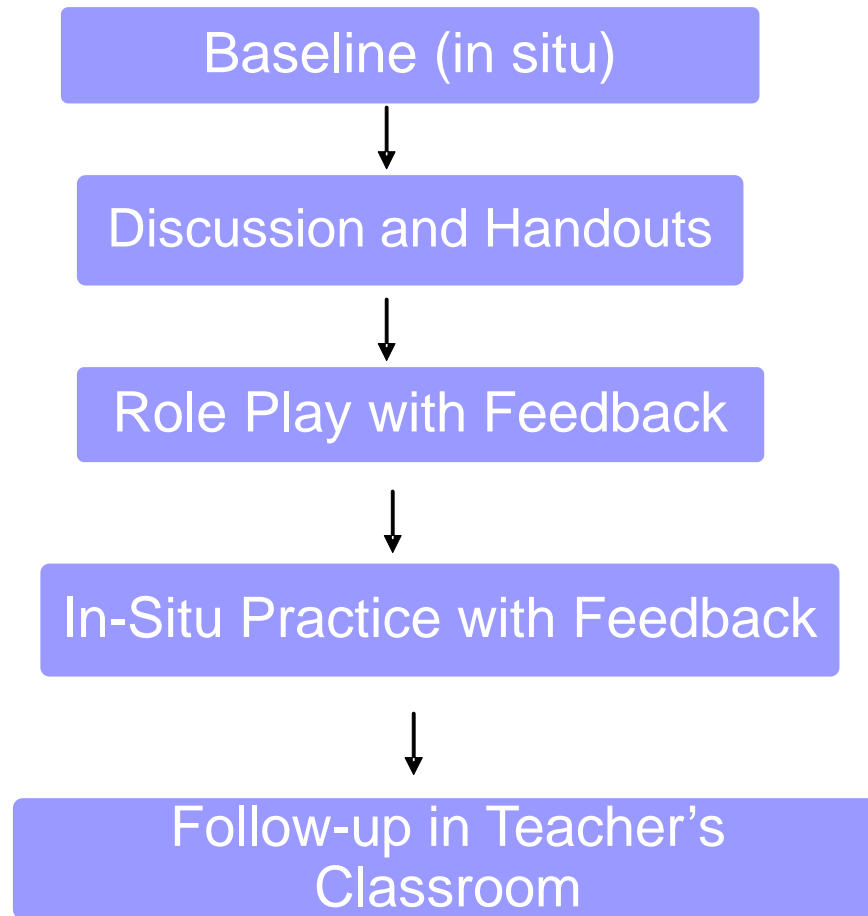

Conclusions

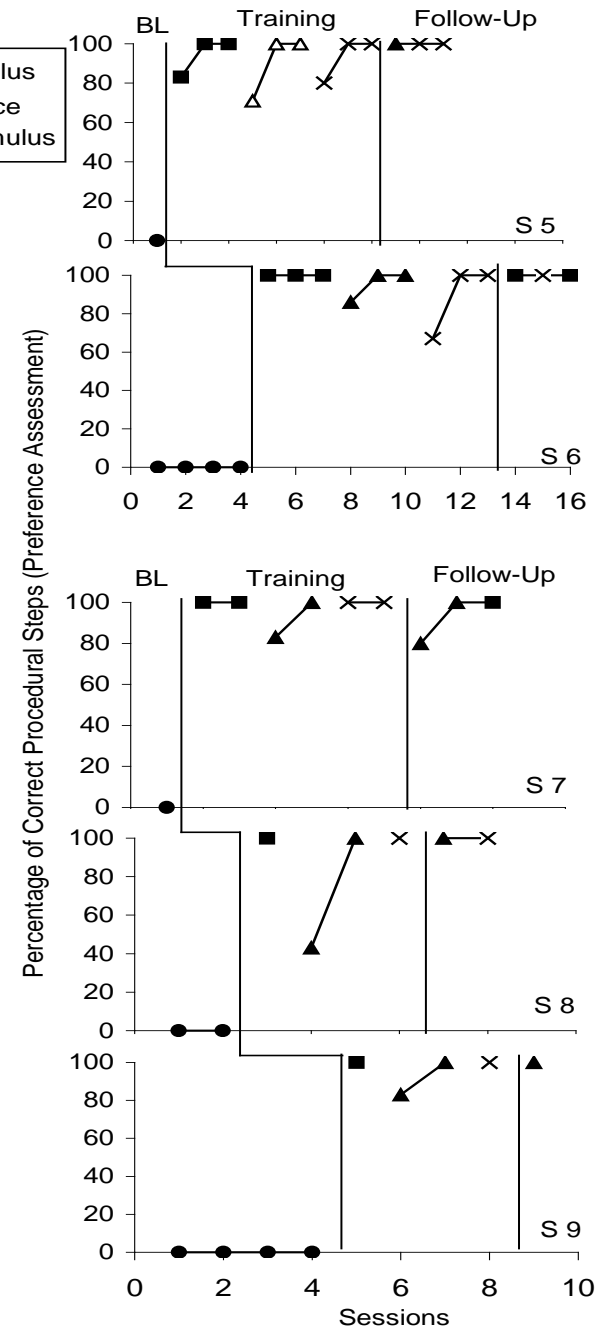

- Teachers acquired large number of skills via brief intensive training
- In-situ feedback unnecessary for some ABA skills (preference assessment, incidental teaching)
- Skills generalized across children and locations
- Data collection impractical

Lerman et al. (2008)

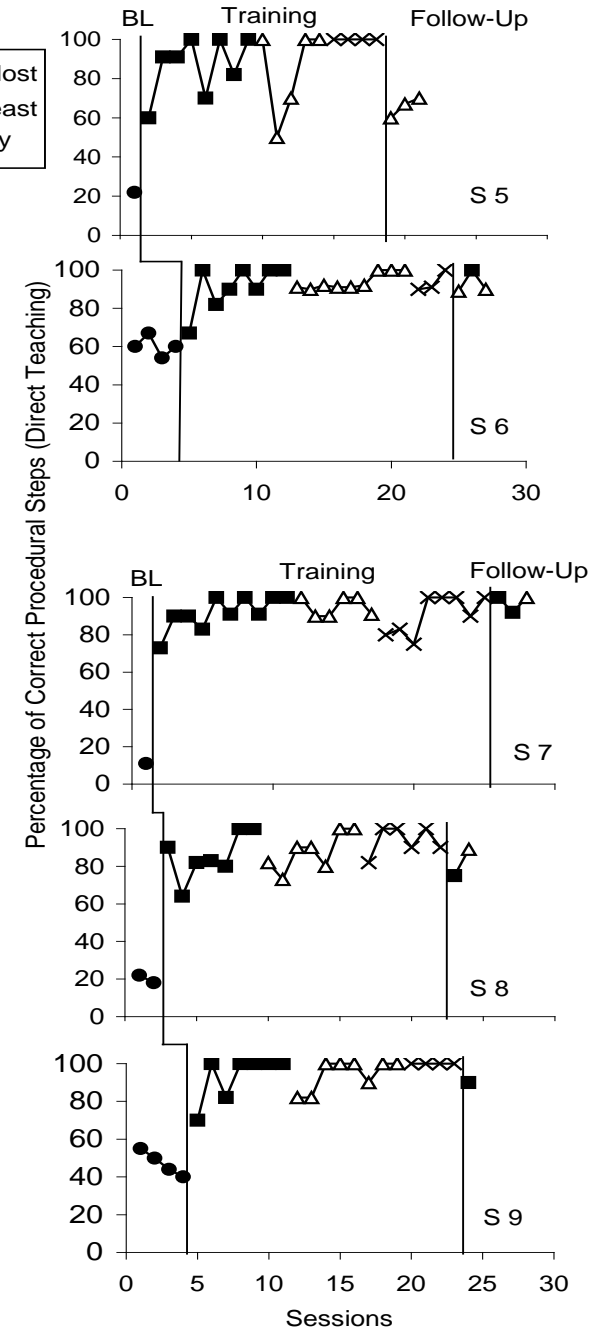

“All-Trial” Data Collection Replaced Trial-by-Trial Data Collection

Lerman et al. (2008)

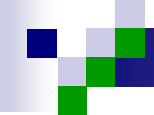

Lerman et al. (2008)

Conclusions

- Brief, intensive training effective
- Practical for practitioners
- Adequate reliability/sensitivity of measurement
- Monthly feedback sufficient to maintain skills
- What type of feedback?

Comparison of Different Types of Feedback

Luck et al. (under review)

- Commonly Used in Classrooms
 - Vocal
 - Written
- Beneficial Alternative?
 - “Video Assisted”
- Examined effectiveness and preference (choice)

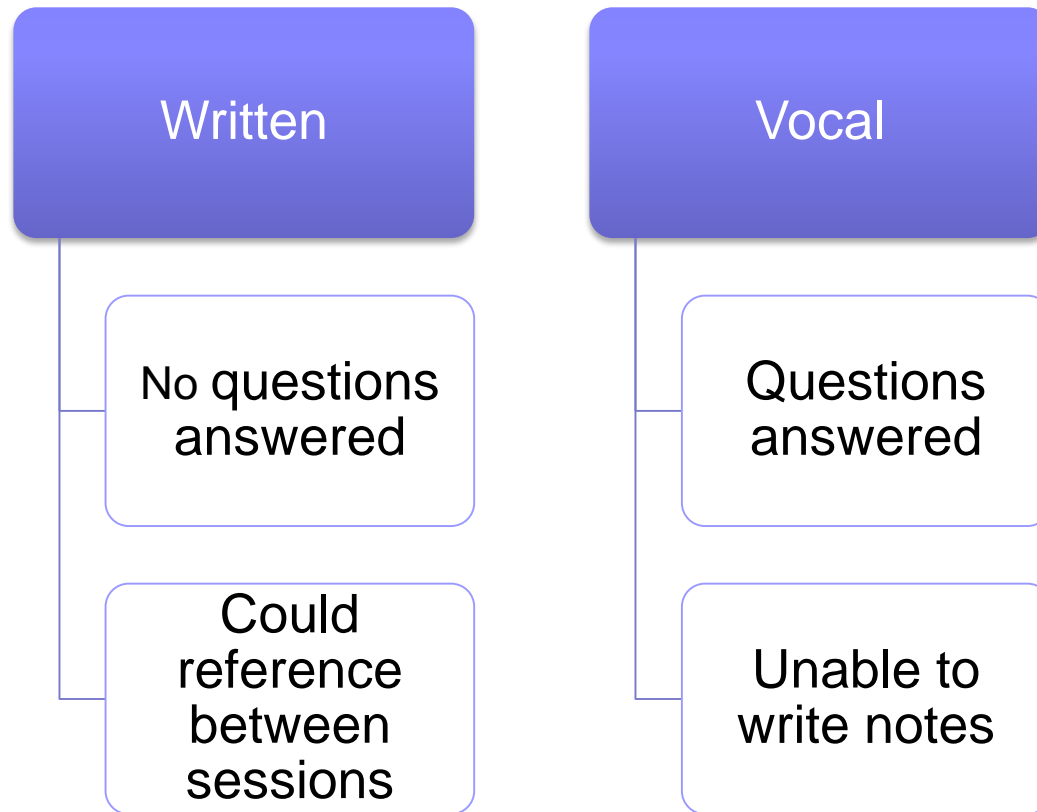

Part 1: Vocal vs Written Feedback

Paired Choice (PS) vs Multiple Stimulus Without Replacement (MSWO)
Preference Assessments

| Participant | PS | MSWO |
|-------------|---------|---------|
| Meredith | Written | Vocal |
| Christina | Vocal | Written |
| Bernice | Written | Vocal |
| Betty | Vocal | Written |
| Robin | Written | Vocal |
| Trudy | Vocal | Written |

Part 1: Vocal vs Written Feedback

Paired Choice (PS) vs Multiple Stimulus Without Replacement (MSWO) Preference Assessments

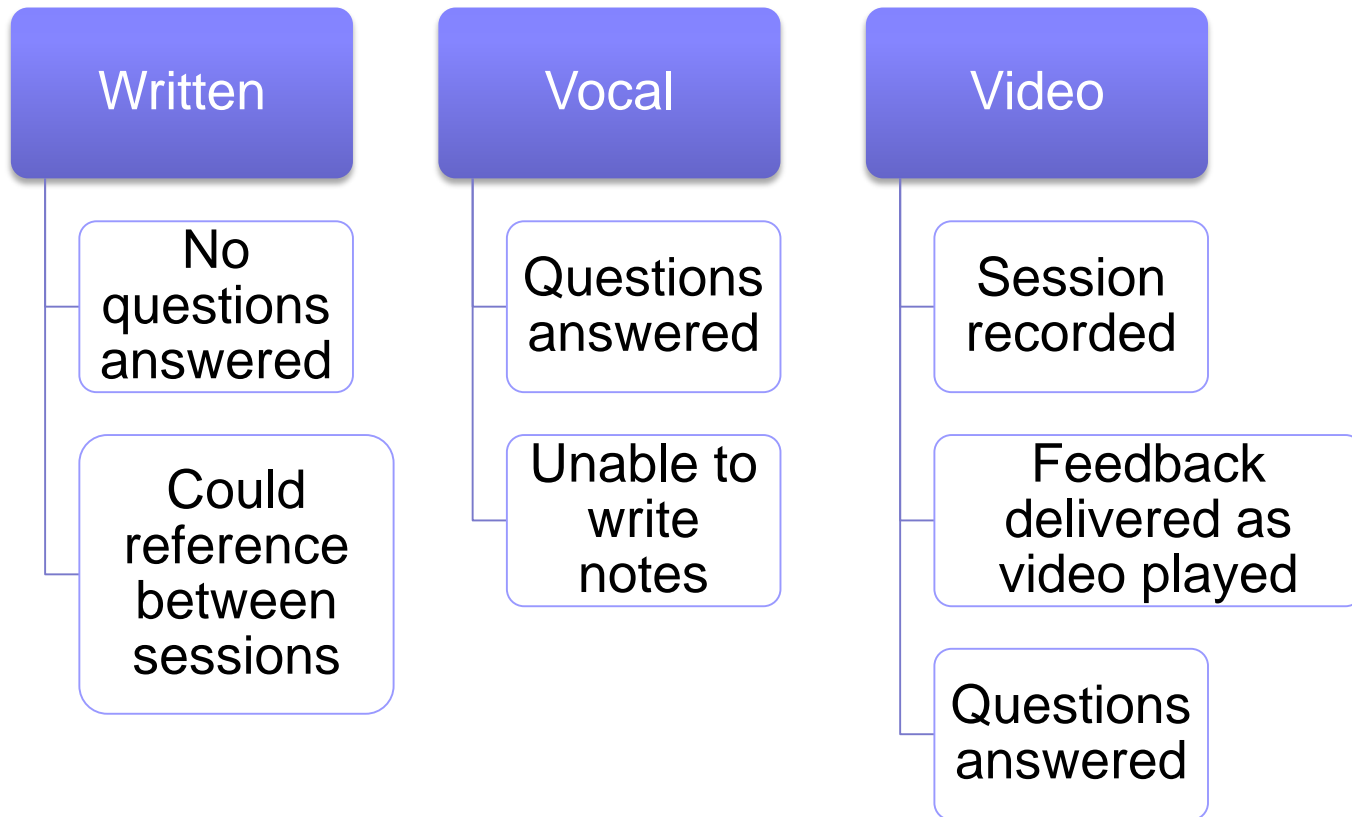

Part 2: Vocal/Written vs. Video-Assisted Feedback

DTT with least-to-most (LTM) vs most-to-least (MTL) prompting hierarchies

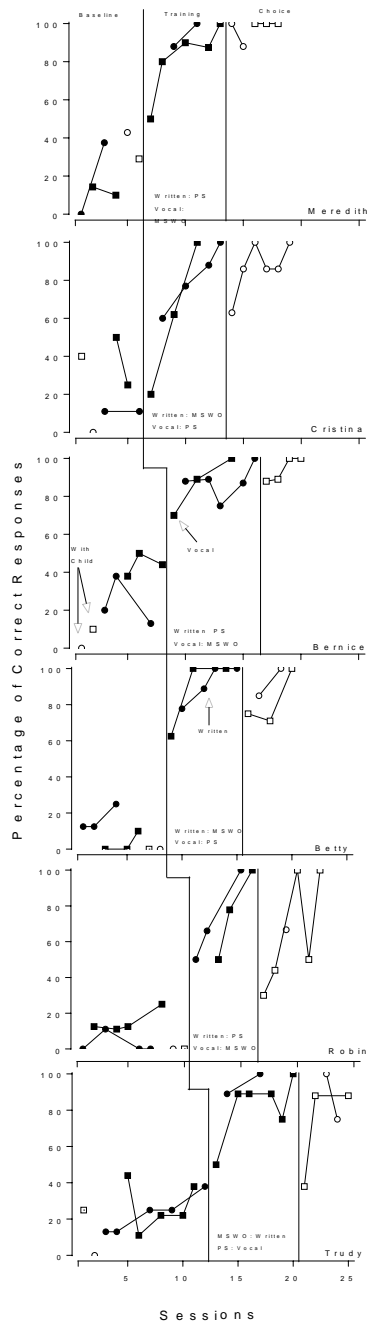

| Participant | LTM | MTL |
|-------------|---------|---------|
| Meredith | Written | Video |
| Christina | Written | Video |
| Bernice | Video | Vocal |
| Betty | Vocal | Video |
| Robin | Video | Vocal |
| Trudy | Video | Written |

Part 2: Vocal/Written vs. Video-Assisted Feedback

DTT with least-to-most (LTM) vs most-to-least (MTL) prompting hierarchies

Part 1 Results

Part 1 Representative Results

Part 2 Results

Effectiveness - Summary

| Participant | Written vs. Vocal | Written vs. Video | Vocal vs. Video |
|-------------|-------------------|-------------------|-----------------|
| Meredith | Written | Equal | N/A |
| Christina | Equal | Video | N/A |
| Bernice | Equal | N/A | Vocal |
| Betty | Equal | N/A | Equal |
| Robin | Equal | N/A | Equal |
| Trudy | Written | Equal | N/A |

Part 1 Choice

Part 2 Choice

Part 1 Representative Results

Part 2 Representative Results

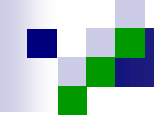

Preference - Summary

| Participant | Written vs. Vocal | Written vs. Video | Vocal vs. Video | Overall Preference |
|-------------|-------------------|-------------------|-----------------|--------------------|
| Meredith | Vocal | Written | N/A | Vocal |
| Christina | Written | Written | N/A | Vocal |
| Bernice | Vocal | N/A | Vocal | Vocal |
| Betty | No Preference | N/A | Vocal | Vocal |
| Robin | Vocal | N/A | Vocal | N/A |
| Trudy | No Preference | No Preference | N/A | Vocal |

Conclusions

- All forms of feedback generally effective
- Majority showed preference for one type
- Training thus far restricted to teachers!!!

Pyramidal Training of Paraprofessionals

Lerman et al. (in preparation)

- Targeted Skill: DTT using LTM + Error Correction
- 16 teacher-paraprofessional pairs
- BST to mastery for teachers
- Given all necessary materials; told “teach as you think practical in classroom”
- Descriptive analysis of outcomes

Outcomes for Paraprofessionals

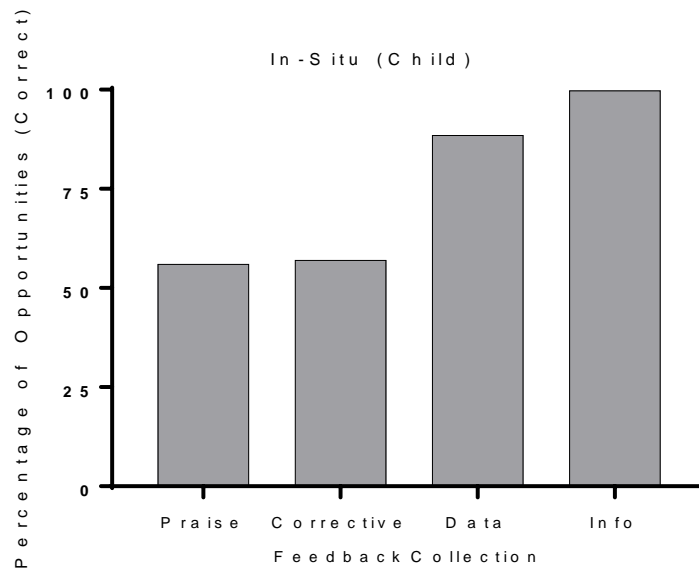

Outcomes for Paraprofessionals: Representative Results

Trainer (Teacher) Integrity – Use of Components

Trainer (Teacher) Integrity – Correct Use

Findings

- All paraprofessionals adequately trained
- 7 of 16 trainers received experimenter feedback
- Mean training time = 263 min (range, 125 min – 325 min)
- Trainers used essential BST components
 - More likely to correct than praise
 - Least likely to collect integrity data
 - But no clear relationship to training outcome!

Identifying Potential Antecedents/Consequences of Problem Behavior Through A-B-C Recording

- Benefits of competency
 - Descriptive data provides information to
 - Generate hypotheses
 - Design functional analysis
 - Evaluate intervention effects
 - Reduces inadvertent reinforcement of problem behavior?
- Lerman, Hovanetz, Strobel, & Tetreault (2009)
 - Narrative vs structured A-B-C recording (accuracy/ease)
- Scott, Lerman, & Luck (in preparation)
 - Computer-based training (detection of multiple and subtle events)

Narrative A-B-C

| | | |
|---|---|--|
| DATE: _____ | | |
| <i>Eddie was told to go to gym class</i> | <i>Yelled, threw a book, and sat on the floor</i> | <i>Eddie was told to stop misbehaving. He was kept in the classroom instead of going to gym.</i> |
| <i>The class was watching a movie; I was working at my desk</i> | <i>Ran out of the classroom</i> | <i>I retrieved Eddie and made him sit near my desk</i> |
| <i>Eddie was working with the speech therapist</i> | <i>Yelled and tried to hit the speech therapist</i> | <i>He was returned to the classroom and placed in time out</i> |
| | | |
| | | |

Structured A-B-C

| | | |
|---|--|--|
| DATE: _____ | | |
| <input type="checkbox"/> Aggression <input type="checkbox"/> Self-Injury <input type="checkbox"/> Elopement | <input type="checkbox"/> Ignored By Someone <input type="checkbox"/> Material/Food Removed <input type="checkbox"/> Other Request Denied <input type="checkbox"/> Given Instruction/Prompt <input type="checkbox"/> None | <input type="checkbox"/> Attention, Response Block <input type="checkbox"/> Redir. to Other Activity <input type="checkbox"/> Material or Food Given <input type="checkbox"/> Work Terminated <input type="checkbox"/> No Response |
| <input type="checkbox"/> Aggression <input type="checkbox"/> Self-Injury <input type="checkbox"/> Elopement | <input type="checkbox"/> Ignored By Someone <input type="checkbox"/> Material/Food Removed <input type="checkbox"/> Other Request Denied <input type="checkbox"/> Given Instruction/Prompt <input type="checkbox"/> None | <input type="checkbox"/> Attention, Response Block <input type="checkbox"/> Redir. to Other Activity <input type="checkbox"/> Material or Food Given <input type="checkbox"/> Work Terminated <input type="checkbox"/> No Response |
| | | |
| | | |

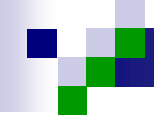

Lerman et al. (2009)

Conclusions

- Modestly accurate under ideal recording conditions
- Neither sufficient to reliably identify function
- Structured form
 - Decreased likelihood of misses (particularly consequences)
 - Preferred by majority of teachers
- Problems detecting simultaneous or subtle events?

Computer-Based Training (Scott et al., in preparation)

- Can we improve the detection of simultaneous/subtle events?

- Simultaneous Events

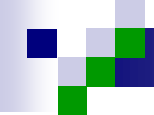

- Examples:

- Antecedents:

- demand delivered + tangible removed

- Consequences:

- escape + attention delivered

Computer-Based Training (Scott et al., in preparation)

- Can we improve the detection of simultaneous/subtle events?

- Subtle Events

- Examples:

- Antecedents:

- class-wide instruction delivered

- materials presented w/out vocal instruction

- Consequences:

- neutral attention delivered

- alternative tangible offered

- demand delayed

Computer-Based Training (Scott et al., in preparation)

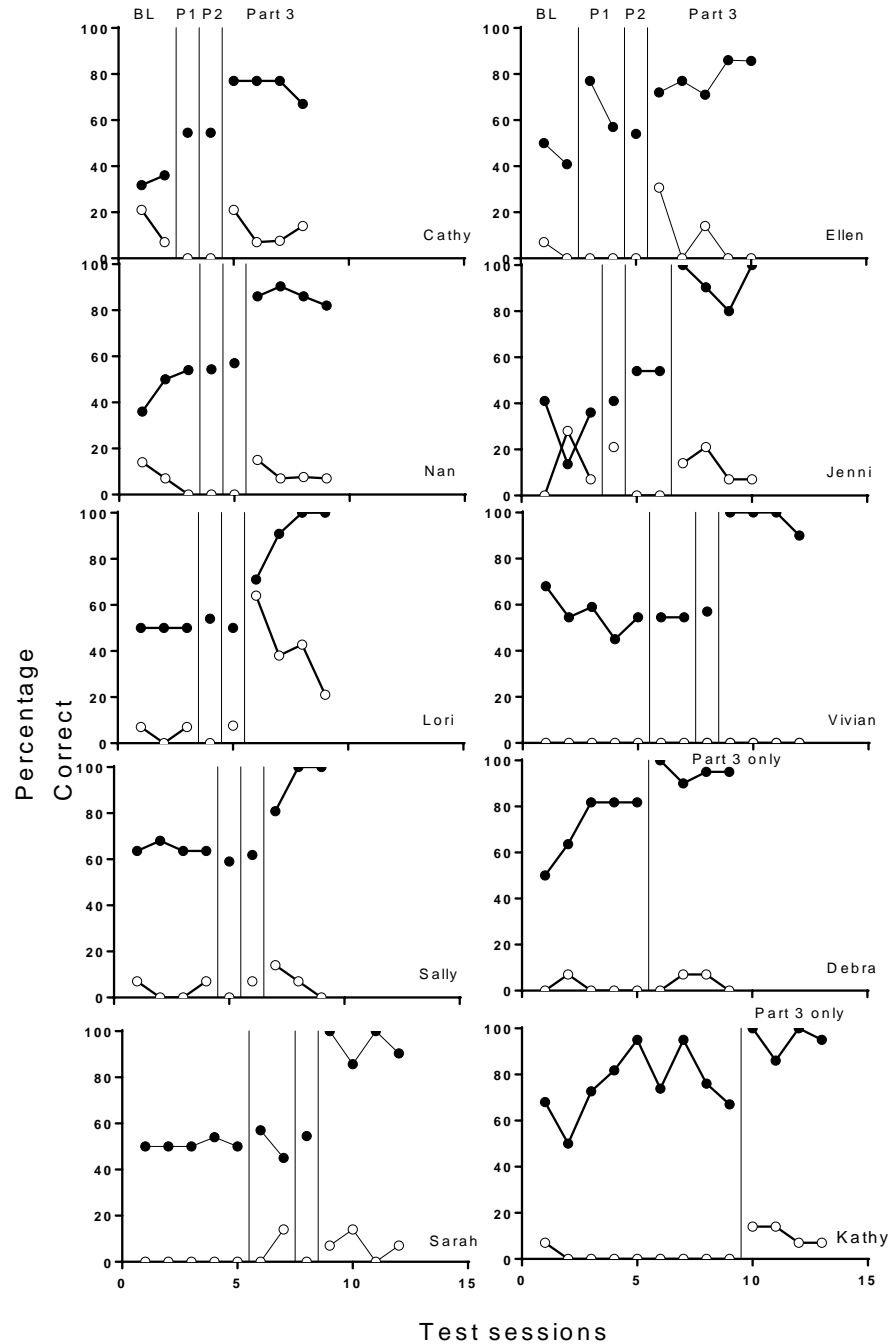

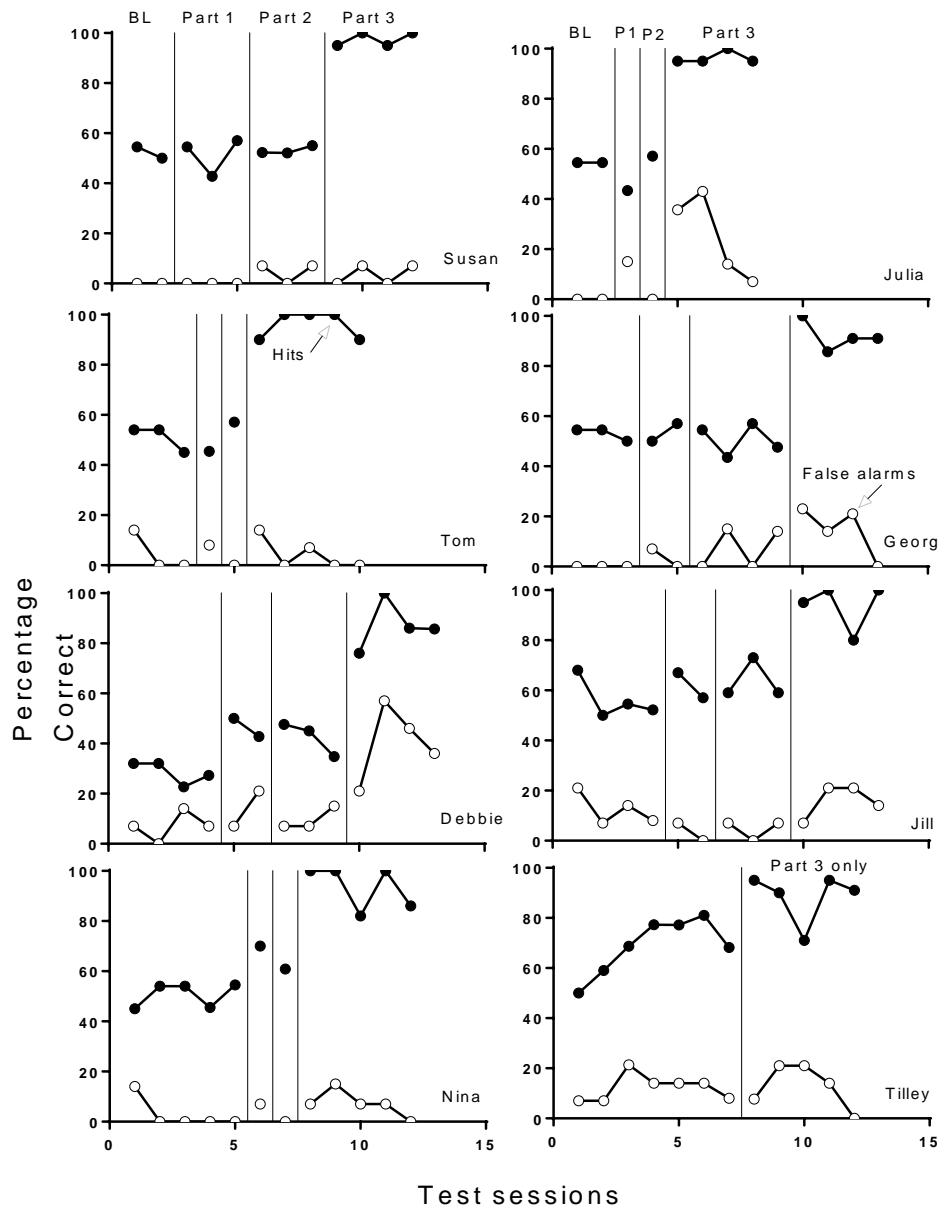

- Will training with single exemplars generalize to other exemplars?
- Will training with single antecedents/consequences generalize to simultaneous antecedents/consequences?
- 20 “Test” Videos:
 - 6 responses (3 single/3 simultaneous)
 - 22 ant/con (4 trained; 18 other)
- Training Video
 - Lecture
 - Models
 - Practice

Computer-Based Training (Scott et al., in preparation)

- Experiment 1: (N = 18)
 - Part 1: Single Exemplar Training
 - Part 2: Multiple Exemplar Training
 - Part 3: Simultaneous Event Training
- Experiment 2: (N = 20)
 - Part 1: Simultaneous Single Exemplar Training
 - Part 2: Multiple Exemplar Training

Experiment 1

Experiment 2

Percentage Correct

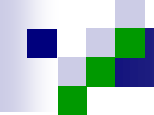

Percentage Correct

Percentage Correct

Percentage Correct

Test sessions

Test sessions

Computer-Based Training (Scott et al., in preparation)

Conclusions

- Computer-based training effective
- Generalized across multiple exemplars
- Simultaneous training critical
 - But false alarms!

Questions/Comments?

Thank You!!!
